

Important information about Lupin (Procedo)

16 January 2019

We are now taking a further step away from depending on Java when we use Lupin. Starting on 23 January, most Lupin users will go directly to the new web client and no longer need to select a version when logging in.

Those in roles such as local administrator, second competition administrator or purchasing coordinator will still have the old Java client and can continue to select a version when logging in. If the web browser you use does not support Java, you will go directly to the new web client and cannot log in to the Java client. In this case you have to try using another browser. A solution to eliminate this problem is in the pipeline. There will be more information on this as soon as the solution is ready.

Please note that there may be a gap of a few days after 23 January when you cannot access the Java client. This is because manual procedures are required to provide the authority that allows you to select a version, and this takes time to implement for all those affected.

You will then still have the option to select a version until all the functionality you need is present in the new web client.

If you have any questions about the updating of Java, contact the IT manager at your department/division.
